

Intel® Distribution for Python* Update 2022.3.1

Release Notes

2 November 2022

Version History/Revision History

| Date | Revision | Description |
|-----------------|----------|---|
| 2 November 2022 | 1.0 | Release Notes for the Intel® Distribution for Python* Update 2022.3.1 |

Intended Audience

The target audience for the release notes are software developers and end users of the Intel® Distribution for Python* Update 2022.3.1.

Customer Support

For technical support, including answers to questions not addressed in this document, visit the technical support forum at <https://software.intel.com/en-us/forums/intel-distribution-for-python> or email Intel Corporation at scripting@intel.com.

1 Introduction

The Python* programming language is an open source programming language with increasing adoption by developers across many application domains and a large ecosystem of available free packages. In particular, the packages commonly used for numerical and scientific computation, called the [SciPy](#) stack, are very popular and heavily used.

Intel® Distribution for Python* is a binary distribution of Python interpreter and commonly used packages for computation and data intensive domains, such as scientific and engineering computing, big data, and data science. The product supports Python 3.9 for Windows, Linux, and macOS. The product simplifies Python installation by providing packages in a binary form so that everything is preconfigured and no compilation tools are needed, as well as contains all the dependences for running on popular OS platforms. Python packages have been accelerated with Intel® Performance Libraries, including [Intel® Math Kernel Library \(Intel® MKL\)](#), [Intel® Threading Building Blocks \(Intel® TBB\)](#), [Intel® Integrated Performance Primitives \(Intel® IPP\)](#), and [Intel® Data Analytics Acceleration Library \(Intel® DAAL\)](#). The packages have been optimized to take advantage of parallelism through the use of vectorization, multi-threading and multi-processing, as well as through the use of optimized communication across multiple nodes.

This document provides system requirements, installation instructions, and lists issues and limitations.

To learn more about this product, see:

- New features in the [New in this Release](#) section below, or in the product help.
- Reference documentation in the [Related Documentation](#) section below
- Installation instructions in the [Installing this Release](#) section below

2 New in this Release

2.1 Intel® Distribution for Python Update 2022.3.1

The following are new features for the release:

- Addressed critical CVE -2018-25032, CVE-2021-28861, CVE-2022-40674, and CVE-2022-37434, CVE-2015-20107

The full list of provided packages is in [Release Content](#).

3 System Requirements

The Intel® Distribution for Python* supports the Intel® 64 architecture. For a complete explanation of this architecture name please read the following article:

[Intel® Architecture Platform Terminology for Development Tools.](#)

The lists below pertain only to the system requirements necessary to support application development with Intel® Distribution for Python*. If you are using Cython*, please review the documentation for your compiler (GCC*, Microsoft Visual Studio*, or Intel® Compiler) to determine the minimum hardware and software requirements.

Minimum System Requirements

- A system based on an Intel® 64 architecture processor supporting the Intel® Streaming SIMD Extensions 4.2 (Intel® SSE4.2) instructions (or compatible non-Intel® processor).

NOTE:

- Incompatible or proprietary instructions in non-Intel® processors may cause the analysis capabilities of this product to function incorrectly. Any attempt to analyze code not supported by Intel® processors may lead to failures in this product.
- For the best experience, a multi-core or multiprocessor system is recommended.
- 2GB free disk space for all product features and all architectures

Note: Intel® Distribution for Python* is expected to work on many more Linux distributions as well. Let us know if you have trouble with the distribution you use.

Hardware Requirements

The same as the hardware requirements for [Intel® oneAPI DPC++ Compiler](#). See details at Release Notes for Intel® DPC++ Compatibility Tool

- GPU:
 - 6th Gen Intel® Core™ processor or higher
 - Intel® Iris® Plus Graphics
 - Intel® Iris® Xe Graphics
 - Intel® Iris® Xe Max Graphics
 - Intel® Iris® Graphics
 - Intel® Iris® Pro Graphics
- CPU:
 - Intel Atom® Processors
 - Intel® Core™ Processor Family
 - Intel® Xeon® Processor Family
 - Intel® Xeon® Scalable Performance Processor Family

Apple M1* hardware is currently not supported

Software Requirements

These OS distributions are tested by Intel or known to work; other distributions may or may not work and are not recommended. If you have questions, access the [Intel Community Forums](#) when you need assistance. If you have Commercial Support, create a support ticket.

Operating Systems:

- 64-bit Linux*: Ubuntu* 18.04, 20.04 (CPU & GPU)
- 64-bit Windows* Pro & Enterprise 10 (CPU & GPU)
 - Using Microsoft's Windows Subsystem for Linux 2 (WSL2) in Windows 10, you can install the native Linux distribution of Intel oneAPI toolkits and libraries on Windows for CPU and GPU workflows. Details [here](#)
- Windows* Server 2016, 2019 (CPU & GPU)
- Red Hat Enterprise Linux 7, 8 (CPU & GPU)
- SUSE Linux Enterprise 15 SP2, 15 SP3, 15 SP4 (CPU & GPU)
- CentOS 7 (CPU & GPU)

To build examples with DPC++ API extensions, you also need:

- GNU* Make on Linux*, nmake on Windows*

ICC Deprecation Notice

Intel® C++ Compiler Classic (icc) is deprecated and will be removed in a oneAPI release in the second half of 2023. Intel recommends that customers transition now to using the LLVM-based Intel® oneAPI DPC++/C++ Compiler (icx) for continued Windows* and Linux* support, new language support, new language features, and optimizations. Note that starting with release 2021.7, macOS* support is limited to Mac* computers with Intel® Processors. For more information on icx, see [the Intel® oneAPI DPC++/C++ Compiler Developer Guide and Reference](#).

OS Deprecation Notice

These operating systems are deprecated in this release, Intel oneAPI 2022.1, and will be removed in a future release:

- Windows Server 2016*
- Red Hat* Enterprise Linux 7
- SUSE Linux Enterprise Server* 15 SP2
- Ubuntu* 18.04 LTS

- CentOS* 7
- Fedora 34
- Fedora 35
- Clear Linux*
- Yocto
- macOS* 10

Support for macOS 10 is deprecated. oneAPI 2022.1 was the last supported release.

External Dependencies

For **Windows***: None

For **Linux***: glibc 2.14-2.29 supported

Visual Studio Code (VS Code) Extensions for Intel® oneAPI Toolkits

The [VS Code extensions for oneAPI Toolkits](#) provide assistance to developers who are creating, debugging and profiling oneAPI applications. The [Using Visual Studio Code with Intel® oneAPI Toolkits User Guide](#) provides additional detail.

The following VS Code extensions are available in the [VS Code marketplace](#):

- Sample Browser for Intel® oneAPI Toolkits
- Environment Configuration for Intel® oneAPI Toolkits
- DevCloud Connector for Intel® oneAPI Toolkits

See also:

- [Get Started with Intel® oneAPI Base Toolkit for Linux](#)
- [Get Started with Intel® oneAPI Base Toolkit for Windows](#)
- [Get Started with Intel® oneAPI Base and HPC Toolkit for MacOS*](#)

Intel® oneAPI 2022.1 is validated on Windows and Linux

- Windows Intel® Graphics Driver, see [this article](#) for instructions to download and install.
- Linux General Purpose Intel GPUs (GPGPU) Driver, see [this article](#). Click the one labeled **20220830** for instructions to download and install.

Known Issue

Intel® oneAPI Toolkits 2022.1.3 and earlier and Intel® Parallel Studio XE (any version) do not support Microsoft Visual Studio 2022. On systems with Microsoft Visual Studio 2022 installed, Intel® oneAPI and Intel® Parallel Studio XE installers may fail during installation, upgrade, modification, or uninstallation. Refer to [this article](#) for more information

4 Installation

Installing this Release

The Intel® Distribution for Python* is compatible with the Conda* package management tool. All modules included in the distribution are initially installed into the root Conda* environment. A virtual environment is also created.

On **Windows*** (if using the standalone installer):

1. Change directory to the installation path. Ensure **intelpython** does not exist
2. Download the zip file for Intel® Distribution for Python* and unzip the file post-download.
3. Change directory to **intelpython**
4. Run from command prompt: **cmd /c setup_intel_python.bat**
5. When the installation completes, activate your root Intel® python conda environment:
 - To modify only your current command shell, use the following command:
 - **.\Scripts\activate**

On **Linux/macOS*** (if using the standalone installer):

1. Change directory to the installation path. Ensure **intelpython** does not exist
2. Download the tarball for Intel® Distribution for Python* and un-tar the file post-download.
3. Extract the contents using the following command:
`tar -xvzf <filename>`
4. Change directory to **intelpython**
5. Run from shell: **bash setup_intel_python.sh**
6. When the installation completes, activate your root Intel® python conda environment:
 - To modify only your current shell, use the following commands:
 - **source ./bin/activate root**
 - To modify all future logins, do one of the following:
 - Add "source <install>/bin/activate root" to your .bashrc (bash) or other logon script.
 - Manually add the <install>/bin directory to your PATH.
 - Use the following command to ensure your environment points to the Intel® Distribution for Python*:
run "**which python**"

Default Installation Folders

The Intel® oneAPI installer uses the Intel® oneAPI Toolkit installation root, which is /opt/intel/oneapi by default. Intel® Distribution for Python* standalone installer uses the current directory as the installation root. Intel® Distribution for Python* is installed under the installation root (<installdir>) in <installdir>/**intelpython/python3.9**. Installation into a directory containing files is not supported.

Changing, Updating, or Removing the Product

The installer always adds new conda packages to the `conda_channel` directory included in Intel® oneAPI, located by default at `/opt/intel/oneapi/conda_channel`. That directory is initially added to your conda configuration file (`.condarc`). If a root python environment does not exist at `<installdir>/intelpython/python3.9`, the installer will create a new python root environment there. **The installer will NOT modify a pre-existing python root environment.** To update your python root environment, use the conda commands listed following the next paragraph. All releases, including updates, will create a *virtual environment* in `<installdir>/intelpython/releases/` containing all new release content.

Intel® Distribution for Python* removal: On **Windows*** or **Linux***: Delete the installation directory and remove additions to your PATH.

You can also use the Conda* package management tool to update individual modules. You can find the Conda* tool in the `bin` directory on Linux* or in the `Scripts` directory on Windows*. Use these commands to do the following with the Conda* tool:

- To install a new module: `conda install <module name>`
- To update an existing module: `conda update <module name>`
- To remove an existing module: `conda remove <module name>`

5 Release Content

Intel® Distribution for Python* packages (New*, Updated**)

| Name | Version | Platform |
|-------------------------------------|------------|---------------------|
| <code>_libgcc_mutex</code> | 0.1* | Linux |
| <code>_openmp_mutex</code> | 4.5* | Linux |
| <code>asn1crypto</code> | 1.4.0 | Linux,Windows,macOS |
| <code>brotlipy</code> | 0.7.0* | Linux,Windows,macOS |
| <code>bzip2</code> | 1.0.8 | Linux,Windows,macOS |
| <code>c_ares</code> | 1.18.1** | Linux,Windows,macOS |
| <code>ca-certificates</code> | 2022.2.1** | Linux,Windows,macOS |
| <code>certifi</code> | 2021.10.8 | Linux,Windows,macOS |
| <code>cffi</code> | 1.15.0** | Linux,Windows,macOS |
| <code>chardet</code> | 4.0.0 | Linux,Windows,macOS |
| <code>common_cmplr_lib_rt</code> | 2022.1.0** | Linux,Windows,macOS |
| <code>conda</code> | 4.11.0** | Linux,Windows,macOS |
| <code>conda-package-handling</code> | 1.7.3 | Linux,Windows,macOS |
| <code>cryptography</code> | 36.0.0** | Linux,Windows,macOS |
| <code>cycler</code> | 0.11.0** | Linux,Windows,macOS |
| <code>cython</code> | 0.29.25** | Linux,Windows,macOS |

| | | |
|--------------|------------|---------------------|
| dal | 2022.1.0** | Linux,Windows,macOS |
| dpcpp_cpp_rt | 2022.1.0** | Linux,Windows,macOS |
| dpctl | 0.12.0** | Linux,Windows |
| dppnp | 0.10.1** | Linux |
| fortran_rt | 2022.0.0** | Linux,Windows,macOS |
| freetype | 2.10.4 | Linux,Windows,macOS |
| funcsigs | 1.0.2 | Linux,Windows,macOS |
| future | 0.18.2 | Linux,Windows,macOS |
| icc_rt | 2022.1.0** | Linux,Windows,macOS |
| idna | 2.10 | Linux,Windows,macOS |
| impi_rt | 2021.6.0** | Linux,Windows,macOS |
| intel-openmp | 2022.1.0** | Linux,Windows,macOS |
| intelpython | 2022.1.0** | Linux,Windows,macOS |
| ipp | 2021.6.0** | Linux,Windows,macOS |
| joblib | 1.0.1 | Linux,Windows,macOS |
| kiwisolver | 1.3.2 | Linux,Windows,macOS |
| libarchive | 3.5.2 | Linux,Windows,macOS |
| libcxx | 11.0.1 | macOS |
| libevent | 2.1.12** | Linux,Windows,macOS |
| libffi | 3.3 | Linux,macOS |
| libgcc-ng | 9.3.0 | Linux |
| libgomp | 9.3.0 | Linux |
| libiconv | 1.16** | Windows,macOS |
| libllvm11 | 11.0.0 | Linux,Windows,macOS |
| libpng | 1.6.37 | Linux,Windows,macOS |
| libprotobuf | 3.19.0** | Linux,Windows,macOS |
| libstdcxx-ng | 9.3.0 | Linux |
| libxml2 | 2.9.12 | Linux,Windows,macOS |
| llvm | 11.0.0 | Linux,Windows |
| llvmlite | 0.38.0** | Linux,Windows,macOS |
| llvm-spirv | 11.0.0 | Linux,Windows |
| lz4-c | 1.9.3 | Linux,Windows,macOS |
| lzo | 2.10 | Linux,Windows,macOS |
| matplotlib | 3.1.2 | Linux,Windows,macOS |
| menuinst | 1.4.18** | Windows |
| mkl | 2022.1.0** | Linux,Windows,macOS |
| mkl-dpcpp | 2022.1.0** | Linux,Windows |
| mkl-service | 2.4.0 | Linux,Windows,macOS |
| mkl_umath | 0.1.1 | Linux,Windows,macOS |
| mkl_fft | 1.3.1 | Linux,Windows,macOS |
| mkl_random | 1.2.2 | Linux,Windows,macOS |
| mpi4py | 3.0.3 | Linux,Windows |
| ncurses | 6.3* | Linux,macOS |
| numba | 0.55.1** | Linux,Windows,macOS |

| | | |
|----------------------|---------------|---------------------|
| numba-dppy | 0.18.0** | Linux,Windows,macOS |
| numexpr | 2.8.1** | Linux,Windows,macOS |
| numpy | 1.21.4** | Linux,Windows,macOS |
| numpy-base | 1.21.4** | Linux,Windows,macOS |
| opencl_rt | 2022.1.0** | Linux,Windows |
| openssl | 1.1.1m** | Linux,Windows,macOS |
| pandas | 1.3.5** | Linux,Windows,macOS |
| pip | 21.2.4 | Linux,Windows,macOS |
| pycosat | 0.6.3 | Linux,Windows,macOS |
| pycparser | 2.21 | Linux,Windows,macOS |
| pyeditline | 2.0.1 | Linux |
| pyopenssl | 22.0.0** | Linux,Windows,macOS |
| pyparsing | 3.0.4** | Linux,Windows,macOS |
| pysocks | 1.7.1** | Linux,Windows,macOS |
| python | 3.9.10** | Linux,Windows,macOS |
| python-dateutil | 2.8.2 | Linux,Windows,macOS |
| python-libarchive-c | 2.9 | Linux,Windows,macOS |
| pytz | 2021.3 | Linux,Windows,macOS |
| pywin32 | 302** | Windows |
| pyyaml | 6.0 | Linux,Windows,macOS |
| requests | 2.25.1 | Linux,Windows,macOS |
| ruamel_yaml | 0.15.100 | Linux,Windows,macOS |
| scikit-learn | 0.24.2 | Linux,Windows,macOS |
| scikit-learn-intelex | 2021.6.0** | Linux,Windows,macOS |
| scipy | 1.7.3** | Linux,Windows,macOS |
| setuptools | 58.0.4 | Linux,Windows,macOS |
| six | 1.16.0 | Linux,Windows,macOS |
| smp | 0.1.4 | Linux |
| snappy | 1.1.8 | Linux, Windows |
| spirv-tools | 2020.5 | Linux |
| sqlite | 3.37.2 | Linux,Windows,macOS |
| tbb | 2021.6.0** | Linux,Windows,macOS |
| tbb4py | 2021.6.0** | Linux,Windows,macOS |
| tcl | 8.6.10 | Linux,Windows,macOS |
| threadpoolctl | 2.2.0** | Linux,Windows,macOS |
| tk | 8.6.10 | Linux,Windows,macOS |
| tqdm | 4.62.2 | Linux,Windows,macOS |
| urllib3 | 1.26.8** | Linux,Windows,macOS |
| vc | 14.2 | Windows |
| vs2015_runtime | 14.27.29016** | Windows |
| wheel | 0.37.1** | Linux,Windows,macOS |
| win_inet_pton | 1.1.0 | Windows |
| wincertstore | 0.2 | Windows |
| xgboost | 1.4.2 | Linux |

| | | |
|------|----------|---------------------|
| xz | 5.2.5 | Linux,Windows,macOS |
| yaml | 0.2.5 | Linux,Windows,macOS |
| zlib | 1.2.11.1 | Linux,Windows,macOS |
| zstd | 1.4.5 | Linux,Windows,macOS |

The installation package contains all the necessary native libraries required by the packages.

6 Known Issues

Please refer to the **Known Issues** in the **Resources** section of the document that is available online:

Optimization Notice

Intel's compilers may or may not optimize to the same degree for non-Intel microprocessors for optimizations that are not unique to Intel microprocessors. These optimizations include SSE2, SSE3, and SSSE3 instruction sets and other optimizations. Intel does not guarantee the availability, functionality, or effectiveness of any optimization on microprocessors not manufactured by Intel. Microprocessor-dependent optimizations in this product are intended for use with Intel microprocessors. Certain optimizations not specific to Intel microarchitecture are reserved for Intel microprocessors. Please refer to the applicable product User and Reference Guides for more information regarding the specific instruction sets covered by this notice.

Notice Revision #20110804
