October 2017

Dear Customer:

Intel manufactures a wide range of products, from microprocessors up to integrated systems. A large number of subassemblies and components are purchased from other manufacturers. Intel uses standardized processes to make sure all our products meet applicable legal requirements, including review of changes in those requirements.

Article 33 of European Union's REACH regulation (Regulation No 1907/2006 on the Registration, Evaluation, Authorization and Restriction of Chemicals) requires suppliers to inform the recipients and consumers if an article contains more than 0.1% (by weight per article) of any substance(s) on the candidate list of Substances of Very High Concern (SVHC). European Court of Justices has issued a ruling that each of the articles incorporated as a component of a complex product is covered by the relevant duties to notify and provide information when they contain a SVHC in a concentration above 0.1% of their mass. The European Chemical Agency (ECHA) periodically publishes SVHC candidate list on their web site at URL: <http://echa.europa.eu/candidate-list-table>.

4,4'-isopropylidenediphenol (CAS# 80-05-7), commonly known as BPA, was included into the SVHC candidate list on January 12, 2017. Some of our suppliers and outsourced manufacturers have recently notified us of the presence of BPA above 0.1% by weight in the substrate core resin materials of their products. Intel has conducted the due diligence and validated the supplier result. Consequently, we are notifying you that BPA may be present above 0.1% by weight in certain article(s) incorporated into some Intel products you have received.

If you want to know which specific Intel products contain BPA above threshold, please contact your Intel Representative or productecology@intel.com. We will continue to monitor our supply chain and the regulatory requirements to ensure Intel products remain compliant.

Regards,
