Products Catalog

**Guidelines and precautions regarding the technical information and use of our products described in this online catalog.**

- If you want to use our products described in this online catalog for applications requiring special qualities or reliability, or for applications where the failure or malfunction of the products may directly jeopardize human life or potentially cause personal injury (e.g. aircraft and aerospace equipment, traffic and transportation equipment, combustion equipment, medical equipment, accident prevention, anti-crime equipment, and/or safety equipment), it is necessary to verify whether the specifications of our products fit to such applications. Please ensure that you will ask and check with our inquiry desk as to whether the specifications of our products fit to such applications use before you use our products.
- The quality and performance of our products as described in this online catalog only apply to our products when used in isolation. Therefore, please ensure you evaluate and verify our products under the specific circumstances in which our products are assembled in your own products and in which our products will actually be used.
- If you use our products in equipment that requires a high degree of reliability, regardless of the application, it is recommended that you set up protection circuits and redundancy circuits in order to ensure safety of your equipment.
- The products and product specifications described in this online catalog are subject to change for improvement without prior notice. Therefore, please be sure to request and confirm the latest product specifications which explain the specifications of our products in detail, before you finalize the design of your applications, purchase, or use our products.
- The technical information in this online catalog provides examples of our products' typical operations and application circuits. We do not guarantee the non-infringement of third party's intellectual property rights and we do not grant any license, right, or interest in our intellectual property.
- If any of our products, product specifications and/or technical information in this online catalog is to be exported or provided to non-residents, the laws and regulations of the exporting country, especially with regard to security and export control, shall be observed.

**<Regarding the Certificate of Compliance with the EU RoHS Directive/REACH Regulations>**

- The switchover date for compliance with the RoHS Directive/REACH Regulations varies depending on the part number or series of our products.
- When you use the inventory of our products for which it is unclear whether those products are compliant with the RoHS Directive/REACH Regulation, please select "Sales Inquiry" in the website inquiry form and contact us.

**We do not take any responsibility for the use of our products outside the scope of the specifications, descriptions, guidelines and precautions described in this online catalog.**

## Safety Precautions (Common precautions for Fixed Resistors)

- When using our products, no matter what sort of equipment they might be used for, be sure to make a written agreement on the specifications with us in advance. The design and specifications in this catalog are subject to change without prior notice.
- Do not use the products beyond the specifications described in this catalog.
- This catalog explains the quality and performance of the products as individual components. Before use, check and evaluate their operations when installed in your products under the actual conditions for use.
- Install the following systems for a failsafe design to ensure safety if these products are to be used in equipment where a defect in these products may cause the loss of human life or other significant damage, such as damage to vehicles (automobile, train, vessel), traffic lights, medical equipment, aerospace equipment, electric heating appliances, combustion/gas equipment, rotating equipment, and disaster/crime prevention equipment.
  - \* Systems equipped with a protection circuit and a protection device.
  - \* Systems equipped with a redundant circuit or other system to prevent an unsafe status in the event of a single fault.
  - \* Systems equipped with an arresting the spread of fire or preventing glitch.

### (1) Precautions for use

- These products are designed and manufactured for general and standard use in general electronic equipment (e.g. AV equipment, home electric appliances, office equipment, information and communication equipment). For applications in which special quality and reliability are required, or if the failure or malfunction of the products may directly jeopardize life or cause threat of personal injury (such as for aircraft and aerospace equipment, traffic and transport equipment, combustion equipment, medical equipment, accident prevention and anti-theft devices, and safety equipment), please be sure to consult with our sales representative in advance and to exchange product specifications which conform to such applications.
- These products are not intended for use in the following special conditions. Before using the products, carefully check the effects on their quality and performance, and determine whether or not they can be used.
  1. In liquid, such as water, oil, chemicals, or organic solvent.
  2. In direct sunlight, outdoors, or in dust.
  3. In salty air or air with a high concentration of corrosive gas, such as  $\text{Cl}_2$ ,  $\text{H}_2\text{S}$ ,  $\text{NH}_3$ ,  $\text{SO}_2$ , or  $\text{NO}_x$ .
  4. Electric Static Discharge (ESD) Environment.

These components are sensitive to static electricity and can be damaged under static shock (ESD). Please take measures to avoid any of these environments.  
Smaller components are more sensitive to ESD environment.
  5. Electromagnetic and Radioactive Environment.

Avoid any environment where strong electromagnetic waves and radiation exist.
  6. In an environment where these products cause dew condensation.
  7. Sealing or coating of these products or a printed circuit board on which these products are mounted, with resin or other materials.
- These products generate Joule heat when energized. Carefully position these products so that their heat will not affect the other components.
- Carefully position these products so that their temperatures will not exceed the category temperature range due to the effects of neighboring heat-generating components. Do not mount or place heat-generating components or inflammables, such as vinyl-coated wires, near these products.
- Note that non-cleaning solder, halogen-based highly active flux, or water-soluble flux may deteriorate the performance or reliability of the products.
- Carefully select a flux cleaning agent for use after soldering. An unsuitable agent may deteriorate the performance or reliability. In particular, when using water or a water-soluble cleaning agent, be careful not to leave water residues. Otherwise, the insulation performance may be deteriorated.
- Do not apply flux to these products after soldering. The activity of flux may be a cause of failures in these products.
- Refer to the recommended soldering conditions and set the soldering condition. High peak temperature or long heating time may impair the performance or the reliability of these products.
- Recommended soldering condition is for the guideline for ensuring the basic characteristics of the products, not for the stable soldering conditions. Conditions for proper soldering should be set up according to individual conditions.

- Do not reuse any products after removal from mounting boards.
- Do not drop these products. If these products are dropped, do not use them. Such products may have received mechanical or electrical damage.
- If any doubt or concern to the safety on these products arise, make sure to inform us immediately and conduct technical examinations at your side.

## **(2) Precautions for storage**

The performance of these products, including the solderability, is guaranteed for a year from the date of arrival at your company, provided that they remain packed as they were when delivered and stored at a temperature of 5 °C to 35 °C and a relative humidity of 45 % to 85 %.

Even within the above guarantee periods, do not store these products in the following conditions. Otherwise, their electrical performance and/or solderability may be deteriorated, and the packaging materials (e.g. taping materials) may be deformed or deteriorated, resulting in mounting failures.

1. In salty air or in air with a high concentration of corrosive gas, such as Cl<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, SO<sub>2</sub>, or NO<sub>x</sub>.
2. In direct sunlight.

## **(3) AEC-Q200 Compliant**

The products are tested based on all or part of the test conditions and methods defined in AEC-Q200.

Please consult with Panasonic for the details of the product specification and specific evaluation test results, etc., and please review and approve Panasonic's product specification before ordering.

<Package markings>

Package markings include the product number, quantity, and country of origin.

In principle, the country of origin should be indicated in English.

## Safety Precautions (Common precautions for Surface Mount Resistors)

The following are precautions for individual products. Please also refer to the common precautions for Fixed Resistors in this catalog.

1. Take measures against mechanical stress during and after mounting of Surface Mount Resistors (hereafter called the resistors) so as not to damage their electrodes and protective coatings.  
Be careful not to misplace the resistors on the land patterns. Otherwise, solder bridging may occur.
2. Keep the rated power and ambient temperature within the specified derating curve.  
Some circuit boards, wiring patterns, temperatures of heat generated by adjacent components, or ambient temperatures can become factors in the rise of the temperature of the resistors, regardless of the level of power applied. Therefore, check the conditions before use and optimize them so as not to damage the boards and peripheral components.  
Make sure to contact us before using the resistors under special conditions.
3. If a transient load (heavy load in a short time) like a pulse is expected to be applied, check and evaluate the operations of the resistors when installed in your products before use. Never exceed the rated power. Otherwise, the performance and/or reliability of the resistors may be impaired.
4. Transient voltage  
If there is a possibility that the transient phenomenon (significantly high voltage applied in a short time) may occur or that a high voltage pulse may be applied, make sure to evaluate and check the characteristics of resistors mounted on your product rather than only depending on the calculated power limit or steady-state conditions.
5. If the resistors are to be used in high frequency circuits, carefully check the operation before use.  
Such circuits change the electrical characteristics of the resistors.
6. Before using halogen-based or other high-activity flux, check the possible effects of the flux residues on the performance and reliability of the resistors.
7. When soldering with a soldering iron, never touch the resistors' bodies with the tip of the soldering iron. When using a soldering iron with a high temperature tip, finish soldering as quickly as possible (within three seconds at 350 °C max.).
8. Mounting of the resistors with excessive or insufficient wetting amount of solder may affect the connection reliability or the performance of the resistors. Carefully check the effects and apply a proper amount of solder for use.
9. When the resistors' protective coatings are chipped, flawed, or removed, the characteristics of the resistors may be impaired. Take special care not to apply mechanical shock during automatic mounting or cause damage during handling of the boards with the resistors mounted.
10. Do not apply shock to the resistors or pinch them with a hard tool (e.g. pliers and tweezers). Otherwise, the resistors' protective coatings and bodies may be chipped, affecting their performance.
11. Avoid excessive bending of printed circuit boards in order to protect the resistors from abnormal stress.
12. Do not immerse the resistors in solvent for a long time.  
Before using solvent, carefully check the effects of immersion.
13. Do not apply excessive tension to the terminals.

## Thick Film Chip Resistors

**Series: ERJ XG, 1G, 2G, 3G, 6G, 8G, 14, 12, 12Z, 1T**

### Features

- Small size and lightweight
- High reliability...Metal glaze thick film resistive element and three layers of electrodes
- Compatible with placement machines ... Taping packaging available
- Suitable for both reflow and flow soldering
- Reference Standard ... IEC 60115-8, JIS C 5201-8, JEITA RC-2134C
- AEC-Q200 compliant (except ERJXG)
- RoHS compliant

## Thin Film Chip Resistors, High Stability and Reliability Type

### ERA V (High resistance value ERA K)

Series: ERA 2V, 3V, 6V

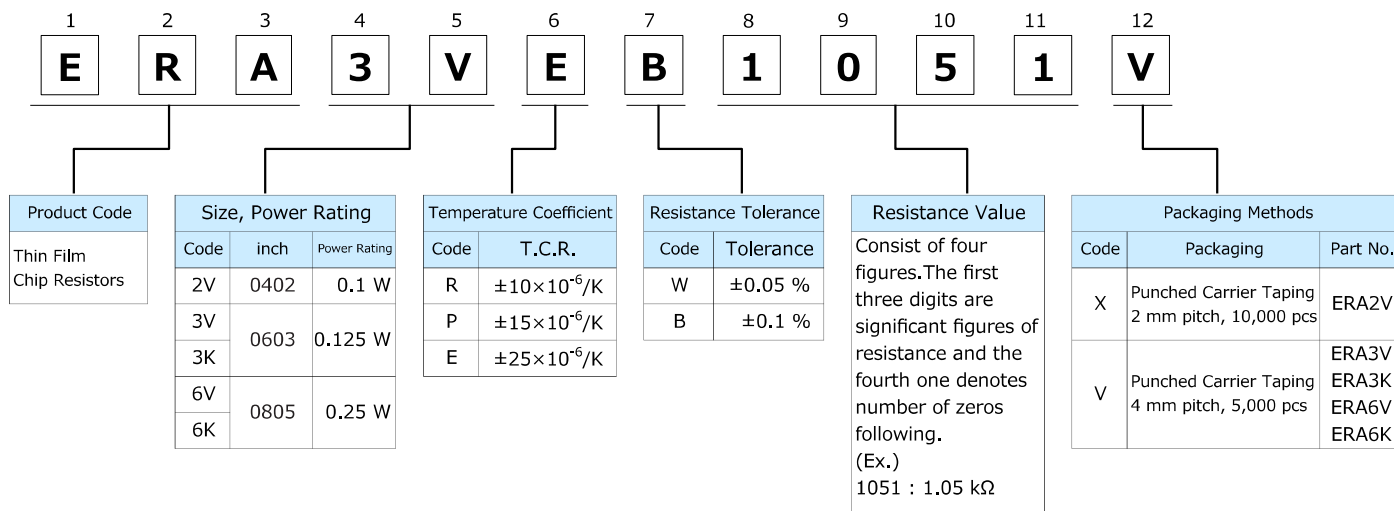

(Series: ERA 3K, 6K )

## Features

- High Power ..... To realize higher Power Rating, Limiting Element Voltage, and Maximum Overload Voltage than current products
- High reliability..... Stable at high temperature and humidity  
(85 °C 85 %RH rated load, Category temperature range : -55 °C to +155 °C)
- High accuracy..... Low resistance tolerance and Temperature Coefficient of Resistance
- High performance... Low current noise, excellent linearity
- Anti-ESD..... Original structure for high ESD performance  
(AEC-Q200-002 HBM Class 1c and above)
- Anti-sulfurated..... Original structure for sulfurated performance
- Reference Standard..... IEC 60115-8, JIS C 5201-8, JEITA RC-2133C
- AEC-Q200 compliant
- RoHS compliant

## High Precision Thick Film Chip Resistors

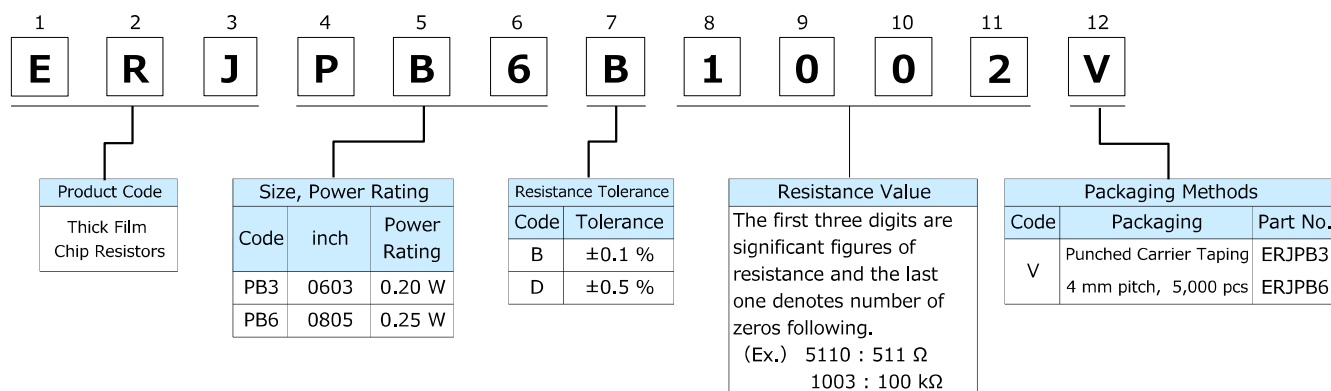

**Series: ERJ PB3, PB6**

### Features

- Achieve the resistance tolerance  $\pm 0.1\%$  with high reliability metal glaze thick film resistor
- Guarantee the temperature coefficient of Resistance  $\pm 50 \times 10^{-6}/K$  in high resistance range up to 1 M $\Omega$
- High power ... 0.20 W : 0603 inch /1608 mm size (ERJPB3)  
0.25 W : 0805 inch /2012 mm size (ERJPB6)
- Reference Standard ... IEC 60115-8, JIS C 5201-8, JEITA RC-2134C
- AEC-Q200 compliant
- RoHS compliant

## Thick Film Chip Resistors / Low Resistance Type

**Series:** ERJ 2LW, 3LW, 6LW,  
ERJ 2BW, 3BW, 6BW, 8BW, 6CW, 8CW  
ERJ 2B, 3B, 6D, 6B, 8B, 14B,  
ERJ 3R, 6R, 8R, 14R, 12R, 12Z, 1TR  
ERJ L03, L06, L08, L14, L12, L1D, L1W

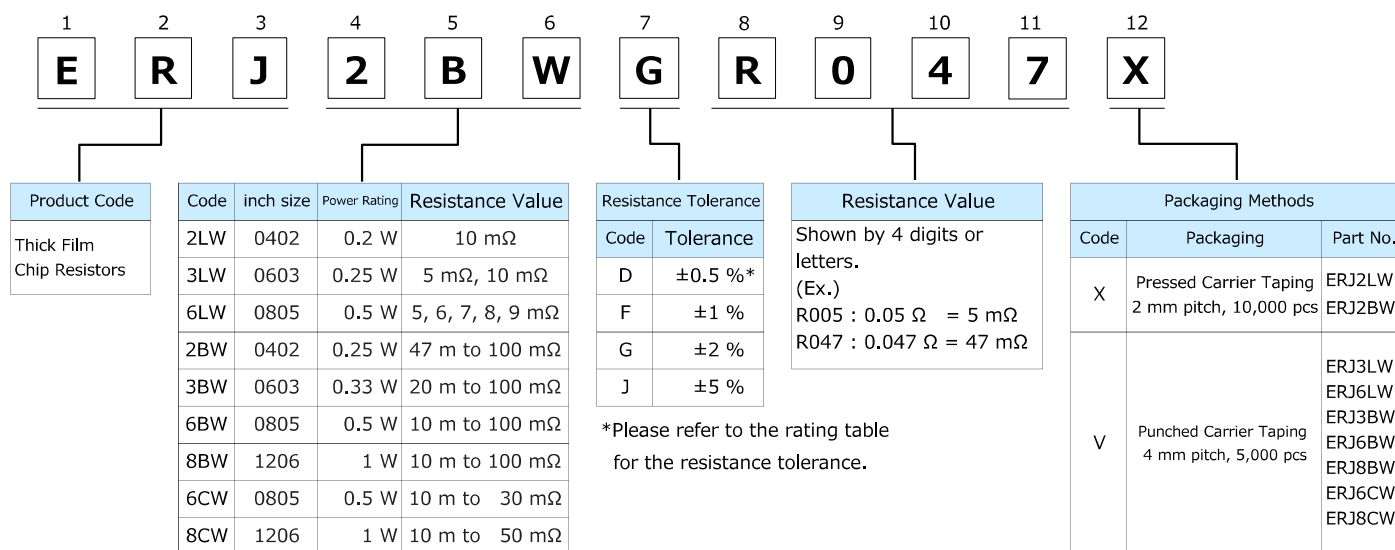

## Features

- Current Sensing resistor
- Small size and lightweight
- Realize both low-resistance & High-precision by original thick film resistive element & special electrode structure
- Suitable for both reflow and flow soldering
- Realize High-power by double-sided resistive elements structure that aimed to suppress temperature rising... ERJ2LW, 3LW, 6LW, 2BW, 3BW, 6BW, 8BW, 6CW, 8CW
- Low TCR.....  $\pm 75 \times 10^{-6}/K$  (ERJ6CW, ERJ8CW)
- Low Resistance Value... Thick film resistors available from 5 m $\Omega$  (ERJ3LW, 6LW)
- Reference Standard..... IEC 60115-8, JIS C 5201-8, JEITA RC-2144
- AEC-Q200 compliant
- RoHS compliant

## Current Sensing Resistors, Metal Plate Type

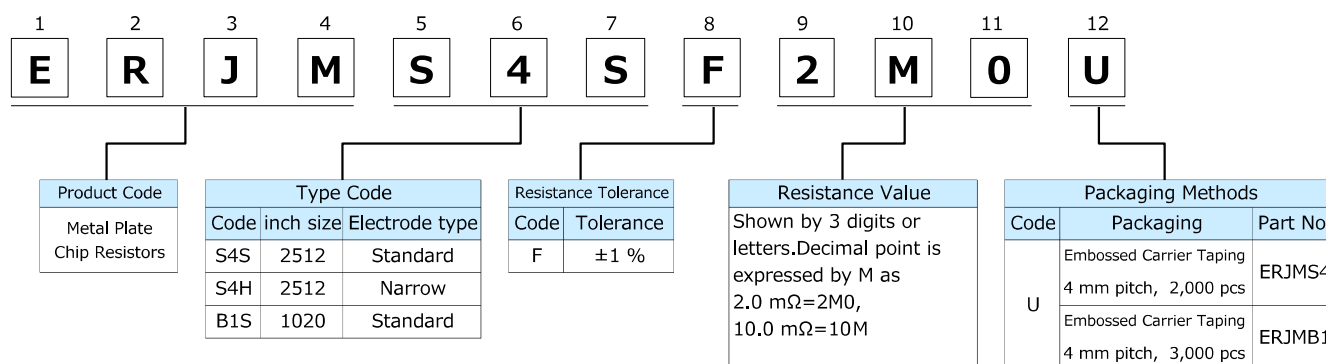

**Series: ERJ MS4, MB1**

### Features

- Ideal for current sensing solution
- Small case size with high power
- Metal plate bonding technology. Excellent long term stability
- Outer Resin with high heat dissipation. Wide temperature range (-65 °C to +170 °C)
- AEC-Q200 compliant
- RoHS compliant
- ISO9001, ISO/TS16949 certified

### Power Derating Curve

If the terminal temperature of the resistor is more than terminal temperature upper limit value of the rated table, please reduce the rated power according to the Power Derating Curve shown in the figure on the right.  
<Supplemented>

In the case of the temperature measurement of the terminal portion of the resistor, Please perform under the following conditions.

- 1) Terminal temperature measurement, please apply the temperature of the higher of either the left or right electrode upper surface of the resistor.
- 2) Please measure the temperature of the resistor in the land pattern printed of circuit board and plan to use by real conditions.

# Low TCR High Power Chip Resistors / Wide Terminal Type

.010

.010

**Series: ERJ D1, D2**

## Features

- Achieved High power and low TCR ( $\pm 100 \times 10^{-6}/K$ ) using wide terminal electrode structure and original material
- Suitable for small size/high power current detection  
(Low TCR enables high accuracy of current detection)
- High solder-joint reliability by wide terminal construction
- Excellent heat dissipation characteristics by wide terminal construction
- AEC-Q200 compliant
- RoHS compliant

## Recommended Applications

- Automotive electronic circuits including ECUs (Electrical control unit), anti-lock breaking systems and air-bag systems.
- Current sensing for power supply circuits in a variety of equipment.

## Current Sensing Resistors, Metal Foil Type

**Series: ERJ MFBA**

This series is not a recommended product.  
Not recommended for new design.

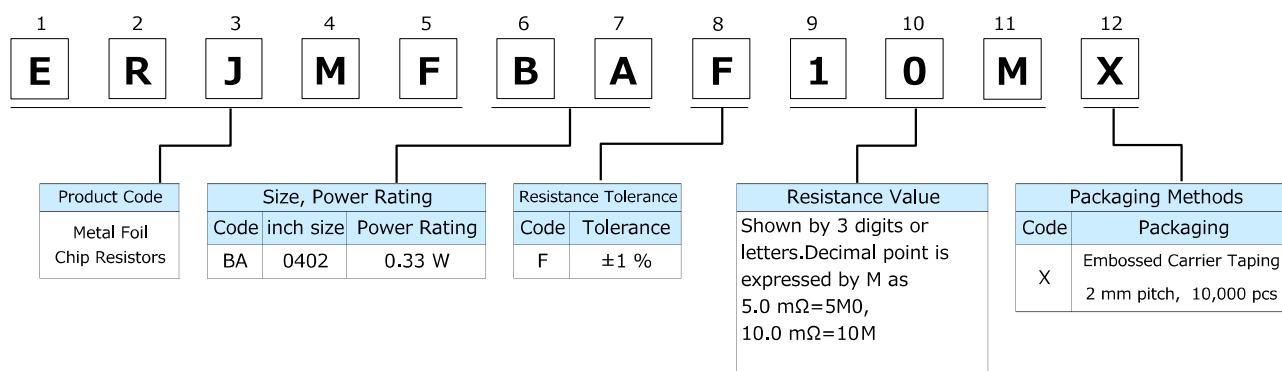

### Features

- Suitable for current sensing for smartphones and other small devices
- Unique metal foil process achieved high power and low temperature coefficient
- RoHS compliant
- ISO9001 certified

# Anti-Sulfurated Thick Film Chip Resistors /Precision Type

Series: ERJ U2R, U3R, U6R  
(Ag-Pd-based inner electrode type)

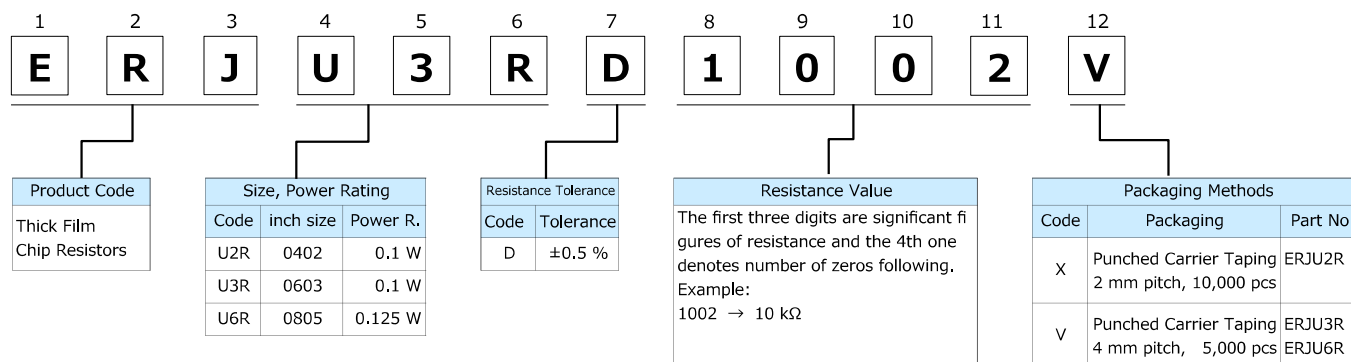

## Features

- High resistance to sulfurization achieved by adopting an Ag-Pd-based inner electrode.
- High precision ... Resistance tolerance :  $\pm 0.5\%$ , TCR :  $\pm 50 \times 10^{-6}/K$
- High reliability ... Metal glaze thick film resistive element and three layers of electrodes.
- Suitable for both reflow and flow soldering.
- Reference Standard ... IEC 60115-8, JIS C 5201-8, JEITA RC-2134C
- AEC-Q200 compliant
- RoHS compliant

## Series: ERJ UP3, UP6, UP8

### Features

- High resistance to sulfurization achieved by adopting Anti-Sulfurated electrode material (Ag-Pd-based inner electrode) and structure
- ESD surge characteristics superior to standard metal film resistors
- High reliability... Metal glaze thick film resistive element and three layers of electrodes
- Suitable for both reflow and flow soldering
- High power ..... 0.25 W : 0603 inch / 1608 mm size (ERJUP3)  
0.50 W : 0805 inch / 2012 mm size (ERJUP6)

# Anti-Sulfurated High Power Chip Resistors / Wide Terminal Type

**Series: ERJ C1**

## Features

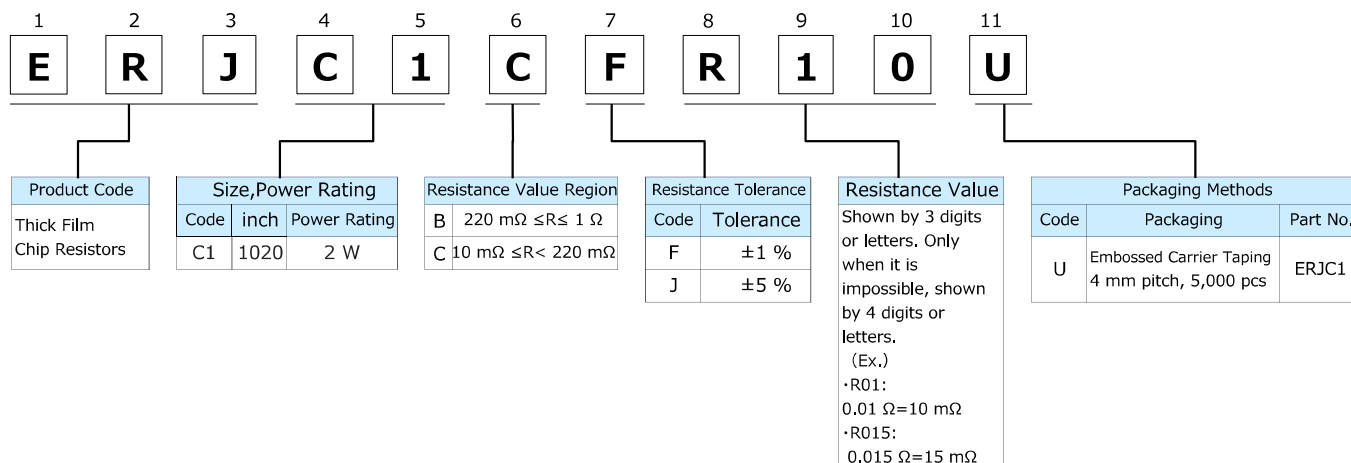

- High resistance to sulfurization achieved by adopting Anti-Sulfurated electrode material (Ag-Pd-based inner electrode) and structure (Covered electrode)
- High solder-joint reliability by wide terminal construction
- Excellent heat dissipation characteristics by wide terminal construction
- AEC-Q200 compliant
- RoHS compliant

## Recommended Applications

- Motor control circuit of the industrial equipment
- Automotive electronic circuits including ECUs (Electrical control unit), anti-lock breaking systems and air-bag systems
- Current sensing for power supply circuits in a variety of equipment

# High Temperature Thick Film Chip Resistor (Automotive Grade)

**Series: ERJ H2G, H2C, H2R, H3G, H3E, H3Q  
H6G, HP6**

## Features

- High reliability...Metal glaze thick film resistive element and high temperature of electrodes structure
- Achieve maximum category temperature 175 °C and rated category temperature 105 °C
- Compatible with placement machines ... Taping packaging available
- Suitable for both reflow and flow soldering
- Reference Standard ... IEC 60115-8, JIS C 5201-8, JEITA RC-2134C
- AEC-Q200 compliant

## Explanation of Part Numbers

- Series ERJH2G, H2C, H2R, H3G, H3E, H3Q, HP6, ±0.5 %, ±1 %, ±5 %

The diagram illustrates the structure of a 12-digit resistor code, broken down into five categories:

- Product Code:** Digits 1-3 (E, R, J) represent Thick Film Chip Resistors.
- Size, Power Rating:** Digits 4-6 (H, 2, R) define the size and power rating. The table below lists the corresponding values.
- Resistance Tolerance:** Digit 7 (D) indicates the tolerance. The table below lists the corresponding values.
- Resistance Value:** Digits 8-11 (1, 0, 0, 2) define the resistance value. The text explains the significance of the first two or three digits and provides examples for three-digit, four-digit, and five-digit types.
- Packaging Methods:** Digit 12 (X) indicates the packaging method. The table below lists the corresponding values.

Size, Power Rating		
Code	inch	Power Rating
H2G	0402	0.1 W
H2C	0402	0.1 W
H2R	0402	0.1 W
H3G	0603	0.125 W
H3E	0603	0.125 W
H3Q	0603	0.25 W
HP6	0805	0.5 W

Resistance Tolerance	
Code	Tolerance
D	±0.5 %
F	±1 %
J	±5 %

The first two or three digits are significant figures of resistance and the third or fourth one denotes number of zeros following.  
 Three digit type (±5 %),  
 Four digit type (±1 %, ±0.5 %)  
 (Ex.) 222 : 2.2 kΩ  
 1002 : 10 KΩ  
 4R7 : 4.7 Ω

- Series ERJH2G, H3G, H6G, Jumper

The diagram illustrates the breakdown of the resistor code **ERJH2G0R00X** into its constituent parts and their meanings:

- Product Code:** ERJ (Thick Film Chip Resistors)
- Size, Rated Current:** H2G (Code: H2G, inch: 0402, Rated Current: 1 A)
- Resistance Tolerance:** 0 (Code: 0, Tolerance: Jumper)
- Resistance Value:** R00 (Jumper is expressed by R00)
- Packaging Methods:** X (Code: X, Packaging: Punched Carrier Taping, 2 mm pitch, 10,000 pcs; Code: V, Packaging: Punched Carrier Taping, 4 mm pitch, 5,000 pcs)

## Chip Resistors Array

**Series: EXB 14V, 18V, 24V, 28V,  
N8V, 2HV, 34V, V4V,  
38V, V8V, S8V**

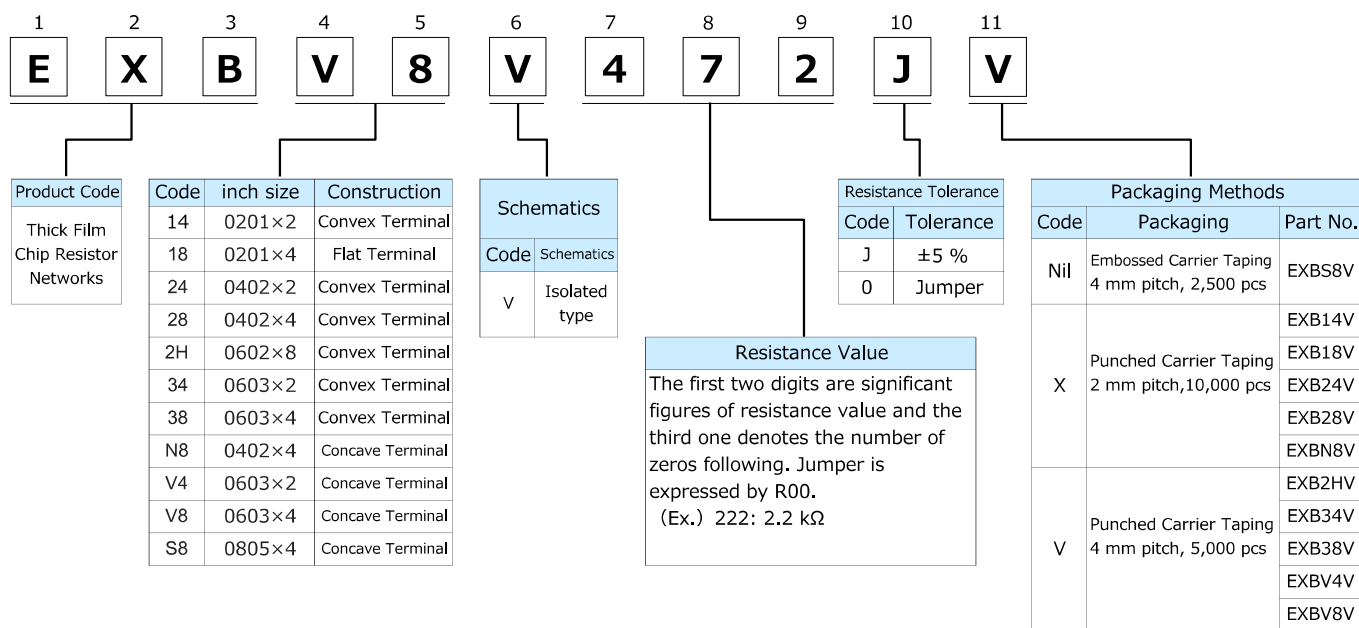

### Features

- High density  
2 resistors in 0.8 mm × 0.6 mm size / 0302 inch size : EXB14V  
4 resistors in 1.4 mm × 0.6 mm size / 0502 inch size : EXB18V  
2 resistors in 1.0 mm × 1.0 mm size / 0404 inch size : EXB24V  
4 resistors in 2.0 mm × 1.0 mm size / 0804 inch size : EXB28V, N8V  
8 resistors in 3.8 mm × 1.6 mm size / 1506 inch size : EXB2HV  
2 resistors in 1.6 mm × 1.6 mm size / 0606 inch size : EXB34V, V4V  
4 resistors in 3.2 mm × 1.6 mm size / 1206 inch size : EXB38V, V8V  
4 resistors in 5.1 mm × 2.2 mm size / 2009 inch size : EXBS8V
- Improvement of placement efficiency  
Placement efficiency of Chip Resistor Array is two, four or eight times of the flat type chip resistor
- Reference Standard … IEC 60115-9, JIS C 5201-9, EIAJ RC-2129
- AEC-Q200 compliant (EXB2, EXB3)
- RoHS compliant

## Anti-Sulfurated Chip Resistors Array

**Series: EXB U14, U18, U24,  
U28, U2H, U34, U38**

### Features

- High resistance to sulfurization achieved by adopting an Ag-Pd-based inner electrode
- High density
  - 2 resistors in 0.8 mm × 0.6 mm size / 0302 inch size : EXBU14
  - 4 resistors in 1.4 mm × 0.6 mm size / 0502 inch size : EXBU18
  - 2 resistors in 1.0 mm × 1.0 mm size / 0404 inch size : EXBU24
  - 4 resistors in 2.0 mm × 1.0 mm size / 0804 inch size : EXBU28

## Chip Resistors Networks

**Series: EXB D, E, A, Q**

## Features

- High density placing for digital signal circuits
  - Bussed 8 or 15 resistors for pull up/down circuits
    - EXBD : 3.2 mm × 1.6 mm × 0.55 mm, 0.635 mm pitch
    - EXBE : 4.0 mm × 2.1 mm × 0.55 mm, 0.8 mm pitch

    - EXBQ : 3.8 mm × 1.6 mm × 0.45 mm, 0.5 mm pitch
  - Available direct placing on the bus line by means of half pitch spacing without through-holes on PWB (“High density placing” is shown below)
- High speed mounting using conventional placing machine
- Reference Standard … IEC 60115-9, JIS C 5201-9, EIAJ RC-2130
- RoHS compliant

# Chip Attenuator

**Series: EXB 14AT, 24AT**

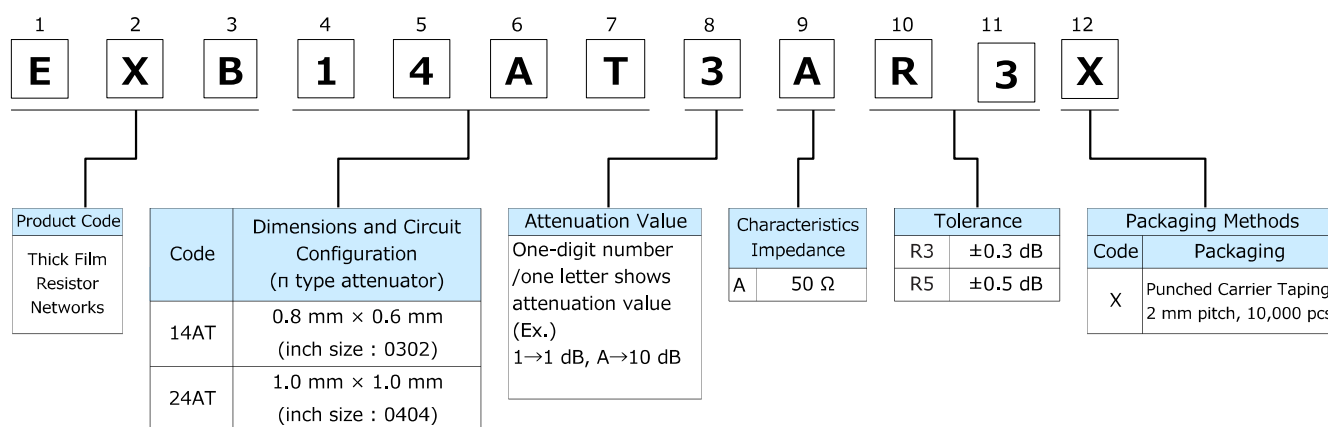

## Features

- Unbalanced n type attenuator circuit in one chip  
EXB14AT(0.8 mm×0.6 mm) , EXB24AT(1.0 mm×1.0 mm)
- Reduced mounting area :  
EXB14AT : About 60 % smaller than the area of an attenuator circuit consisting of three 0603 chip resistors, almost equal to the area of three 0402 chip resistors  
EXB24AT : About 50 % smaller than the area of an attenuator circuit consisting of three 1005 chip resistors, almost equal to the area of three 0603 chip resistors
- Mounting cost reduction : (Only 1 chip placed as compared to 3)
- Attenuation : 1 dB to 10 dB
- RoHS compliant

## Recommended Applications

- Attenuation / level control / impedance matching of high frequency  
(communication signalling equipment cellular phones(GSM, CDMA, PDC, etc.), PHS, PDAs)
- **As for Packaging Methods, Land Pattern, Soldering Conditions and Safety Precautions,**  
Please see Data Files

## Explanation of Part Numbers

## Ratings

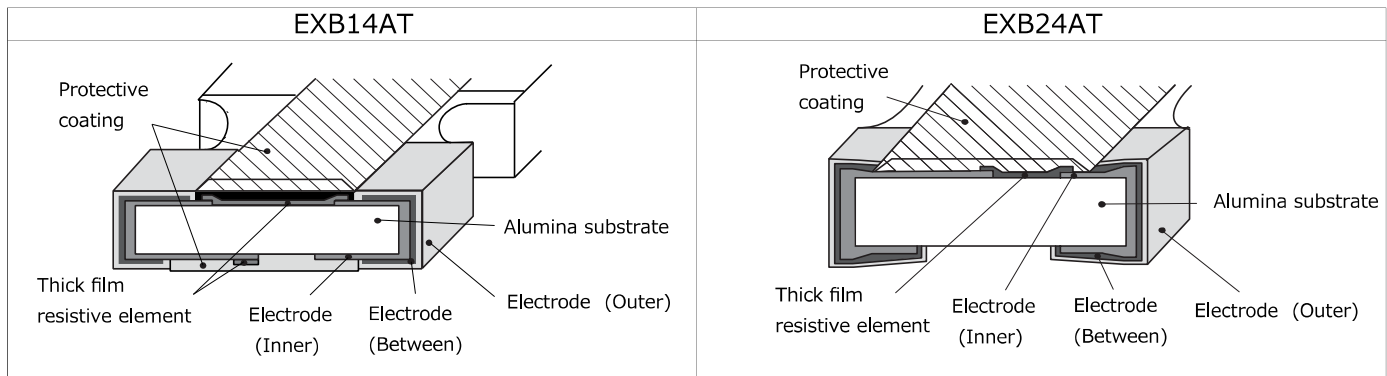

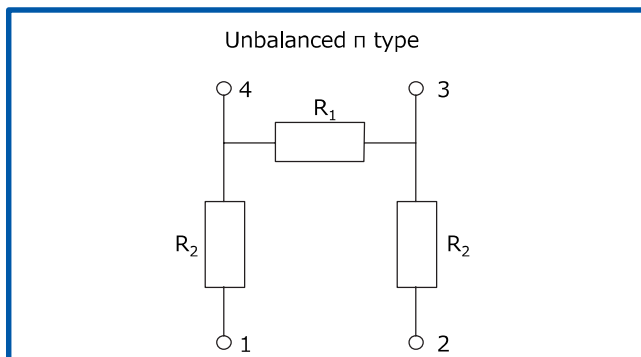

Part No.	EXB14AT, EXB24AT
Attenuation Value	1 dB, 2 dB, 3 dB, 4 dB, 5 dB, 6 dB, 10 dB*
Attenuation Value Tolerance	1 dB, 2 dB, 3 dB, 4 dB, 5dB : ±0.3 dB 6 dB, 10 dB : ±0.5 dB
Characteristic Impedance	50 Ω
Power Rating at 70 °C	0.04 W/ package
Frequency Range	DC to 3.0 GHz
VSWR (Voltage Standing Wave Ratio)	1.3 max.
Number of Resistors	3 resistors
Number of Terminals	4 terminals
Category Temperature Range	-55 °C to +125 °C

\* Please inquire about the other Attenuator value

**Power Derating Curve**

For resistors operated in ambient temperatures above 70 °C, power rating shall be derated in accordance with the figure on the right.

Pressed      Punched      Embosse

Technical drawing of a punched metal plate. The drawing includes three cross-sectional views (Pressed, Punched, Embossed) and a detailed plan view of the plate.

**Cross-sectional views:**

- Pressed:** Shows a rectangular plate with a central rectangular hole.
- Punched:** Shows a rectangular plate with a central rectangular hole, similar to the pressed view.
- Embosse:** Shows a rectangular plate with a central rectangular hole, featuring a raised, embossed edge.

**Plan View (Detailed Drawing):**

- Dimensions:**
  - $\phi D_0$ : Diameter of the outer circular hole.
  - $\phi D_1$  (Only Emboss): Diameter of the inner circular hole (only for the embossed version).
  - $P_1$ ,  $P_2$ ,  $P_0$ : Pitch distances between the holes.
  - $E$ : Thickness of the plate.
  - $F$ : Distance from the center of the hole to the edge of the plate.
  - $W$ : Total width of the plate.
  - $T$ : Thickness of the plate (indicated in the cross-sections).
  - $A$ : Distance from the center of the hole to the edge of the plate (indicated in the cross-sections).
  - $B$ : Distance from the center of the hole to the edge of the plate (indicated in the cross-sections).
- Labels:**
  - $\phi D_0$ : Diameter of the outer circular hole.
  - $\phi D_1$  (Only Emboss): Diameter of the inner circular hole (only for the embossed version).
  - $P_1$ ,  $P_2$ ,  $P_0$ : Pitch distances between the holes.
  - $E$ : Thickness of the plate.
  - $F$ : Distance from the center of the hole to the edge of the plate.
  - $W$ : Total width of the plate.
  - $T$ : Thickness of the plate (indicated in the cross-sections).
  - $A$ : Distance from the center of the hole to the edge of the plate (indicated in the cross-sections).
  - $B$ : Distance from the center of the hole to the edge of the plate (indicated in the cross-sections).
- Notes:**
  - (2 mm pitch): Indicates the pitch distance between the holes.

\* When designing high density land patterns, examine the reliability of isolation among the lines and adopt the chip resistor networks.

## Recommended Soldering Conditions

Recommendations and precautions are described below.

### ● Rectangular Type

#### ● Recommended soldering conditions for reflow

- Reflow soldering shall be performed a maximum of two times.
- Please contact us for additional information when used in conditions other than those specified.
- Please measure the temperature of the terminals and study every kind of solder and printed circuit board for solderability before actual use.

For soldering (Example : Sn/Pb )

	Temperature	Time
Preheating	140 °C to 160 °C	60 s to 120 s
Main heating	Above 200 °C	30 s to 40 s
Peak	235 ± 5 °C	max. 10 s

For lead-free soldering (Example : Sn/Ag/Cu)

	Temperature	Time
Preheating	150 °C to 180 °C	60 s to 120 s
Main heating	Above 230 °C	30 s to 40 s
Peak	max. 260 °C	max. 10 s

#### ● Recommended soldering conditions for flow

	For soldering		For lead-free soldering	
	Temperature	Time	Temperature	Time
Preheating	140 °C to 160 °C	60 s to 120 s	150 °C to 180 °C	60 s to 120 s
Soldering	245 ± 5 °C	20 s to 30 s	max. 260 °C	max. 10 s

Peak	max. 260 °C	max. 10 s

#### ● Flow soldering

We do not recommend flow soldering, because a solder bridge may form.

Please contact us regarding flow soldering of EXBA series.

## Standard for Resistance Value and Resistance Tolerance

## Basis Standard

IEC Publication 60062: Marking codes for resistors and capacitors.

IEC Publication 60063: Preferred number series for resistors and capacitors.

JIS C 5062: Marking codes for resistors and capacitors.

JIS C 5063: Preferred number series for resistors and capacitors.

## Resistance Values

The resistance values are notched by "Ratio" below in each series.

Series	Resistance Tolerance (Standard)	Ratio	Remarks
E6	±20 %	$\sqrt[6]{10}=1.46$	Please refer to standard resistance values shown on this catalog.
E12	±10 %	$\sqrt[12]{10}=1.21$	
E24	± 5 %	$\sqrt[24]{10}=1.10$	
E48	± 2 %	$\sqrt[48]{10}=1.05$	
E96	± 1 %	$\sqrt[96]{10}=1.02$	

## How to express the resistance value with a Panasonic part number

The resistance value expressed in ohms is identified by a three digit number or a four digit number.

The last digit specifies the number of zeroes to follow.

The letter "R" shall be used as the decimal point for less than 10 Ω.

The examples of a three digit number

Resistance Code	Value in ohms (Ω)
R56	0.56
5R6	5.6
100	10
271	270
102	1 k
273	27 k
104	100 k
275	2.7 M
106	10 M
107	100 M

The examples of a four digit number

Resistance Code	Value in ohms (Ω)
R562	0.562
5R62	5.62
56R2	56.2
1000	100
2711	2.71 k
1002	10 k
2713	271 k
1004	1 M
2751	2.71 M
1006	100 M

## How to express the resistance tolerance with a Panasonic part number

The resistance tolerance is identified by a single letter in accordance with the following table and the code is placed just before the resistance code in the following examples.

Tolerance Code	Tolerance (%)	Examples
W	±0.05	W1001 : 1000 Ω±0.05 %
B	±0.1	B1001 : 1000 Ω±0.1 %
C	±0.25	C1001 : 1000 Ω±0.25 %
D	±0.5	D1001 : 1000 Ω±0.5 %
F	±1	F1001 : 1000 Ω±1 %
G	±2	G1001 : 1000 Ω±2 %
J	±5	J101 : 100 Ω±5 %
K	±10	K101 : 100 Ω±10 %

## **CAUTION AND WARNING**

1. The electronic components contained in this catalog are designed and produced for use in home electric appliances, office equipment, information equipment, communications equipment, and other general purpose electronic devices.  
Before use of any of these components for equipment that requires a high degree of safety, such as medical instruments, aerospace equipment, disaster-prevention equipment, security equipment, vehicles (automobile, train, vessel), please be sure to contact our sales representative corporation.
2. When applying one of these components for equipment requiring a high degree of safety, no matter what sort of application it might be, be sure to install a protective circuit or redundancy arrangement to enhance the safety of your equipment. In addition, please carry out the safety test on your own responsibility.
3. When using our products, no matter what sort of equipment they might be used for, be sure to make a written agreement on the specifications with us in advance.
4. Technical information contained in this catalog is intended to convey examples of typical performances and or applications and is not intended to make any warranty with respect to the intellectual property rights or any other related rights of our company or any third parties nor grant any license under such rights.
5. In order to export products in this catalog, the exporter may be subject to the export license requirement under the Foreign Exchange and Foreign Trade Law of Japan.
6. No ozone-depleting substances (ODSs) under the Montreal Protocol are used in the manufacturing processes of Automotive & Industrial Systems Company, Panasonic Corporation.
